                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Letter' h: The proteins can be used for inhibiting profess profiteration, when coadministered with a p53 protein. The RISPs can be used for treating diseases characterised by abnormal cellular profiteration, particularly cancers. The RISPs have a broader spectum of

They can be used for the production of proteins such as tument suppressor proteins which can be used for treating diseases characterised
                                                        2941 CIGIGIGCTIVITITIAIAAATITIGCITTIAATIAAATAAAAGCIGGAAGCAAGIAIA 4000
                                     The present sequence appears in the specification, which describes a retracycline responsive expression vector (TREV), which contains a sequence encoding a fusion protein comprising a transcriptional transactivation domain (TIP) operatively attached to a tetracycline repressor protein (TRP), the first sequence operatively positioned downstream of a promoter. The vector also contains a cloning site operatively positioned downstream of a basal promoter comprising a tetracycline operator. The TREVS can be used to produce stable cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

The proteins can be used for inhibiting coludar proliferation, when coadministered with a p54 protein. The RISPs can be used for treating diseases characterised by abnormal cellular proliferation, particularly cancers. The RISPs have a broader spectrum of activity than wild type RTSPs.

This sequence encodes a modified retitublishem tumour suppressor protein (RTSP) of the invention. The protein can be used for inhibiting cellular proliferation, when coadministered with a ptv protein. The RTSPs can be used for treating diseases characterised by abnormal cellular.
                                                                              proliferation, particularly cancers. The RTSPs have a broader spectrum of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         HITTELLETTELLETTELLETTELLETTELLETTELLETTELLETTELLETTELTTELTTELTTELTETTELTETTELTETTELTETTELTETTELTETTELTETTELTE

The profeins can be used for inhibiting cellular profileration, when coadministered with a p53 profein. The RTSPs can be used for freating diseases characterised by abnormal cellular.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  proliferation, particularly cancers. inhibiting cellular proliteration, particularly cancer

"Laim 22: Page 150 155; 249pp; English.

protein (RTSP) of the invention. The proteins can be used for inhibiting cellular proliferation, when coadministered with a p54 protein. The RTSPs can be used for treating diseases characterised by abnormal cellular. proliferation, particularly cancers. The KTSPs have a broader spectrum of This sequence encodes a modified retinoblastoma tumour suppressor activity than wild type RISPS.

This sequence enoughs a rediffed retingularional turner represent protein (MTSP) of the invention. The proteins can be used for inhibiting cellular problication, when coadministered with a p53 protein. The KISPs can be used for treating diseases characterised by abnormal cellular profiferation, particularly cancers. The RISPs have a broader spectrum of activity than wild type RISPs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Modified retimoblastoms tumbur suppressur: RISF protein, cancer therapy: cellular prollieration inhibitor; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             3
```

```
This sequence encodes a modified retincblustoms tumbour suppressor protein (RISP) of the invention. The proteins can be used for inhibiting cellular proliferation, when coordministered with a p53 protein. The RTSPs can be used for treating diseases characterised by abnormal cellular.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  proliferation, particularly cancers. The RTSPs have a broader spectrum of

proliferation, particularly cancers. The RISPs have a broader spectrum of activity than wild type RISPs.

```
This sequence encodes a modified relinoblastoma tuniour suppressor protein (RTSP) of the invention. The proteins can be used for inhibiting cellular proliferation, when condministered with a p52 protein. The Pugps can be used for treating diseases characterised by abnormal cellular.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Modified retinoblasiona tumour suppressor, RTSP protein, caucer therapy, cellular proliferation inhibitor; ss.

The proteins can be used for inhibiting retituiar proliferation, when confinistened with a p53 protein. The RISPs can be used for treating diseases characterised by abnormal cellular proliferation, particularly cancers. The RISPs have a broader spectrum of
